

Weather API Integration

Objective

This project is developed using Python and API integration.

The main objective of this project is to fetch real-time weather data based on user input.

The program displays temperature, humidity, and weather conditions using online weather information.

This project also demonstrates the use of Python requests library and JSON data handling.

Code

```
1 import requests
2
3 city = input("Enter city name: ")
4
5 url = f"https://wttr.in/{city}?format=json"
6
7 response = requests.get(url)
8
9 data = response.json()
10
11 print("\nWeather Report")
12 print("-----")
13
14
15 print("City:", city)
16 print("Temperature:", data["current_condition"][0]["temp_C"], "°C")
17 print("Weather:", data["current_condition"][0]["weatherDesc"][0]["value"])
18 print("Humidity:", data["current_condition"][0]["humidity"])
```

User input for city search

The screenshot shows the Visual Studio Code interface with a file named `TASK 2.py` open. The file path is `C:\Users\DELL\AppData\Local\Programs\Python\Python314\include\TASK 2.py`. The code in the editor is as follows:

```
1 import requests
2
3 city = input("Enter city name: ")
4
5 url = f"https://wttr.in/{city}?format=j1"
6
7 response = requests.get(url)
8
9 data = response.json()
10
11 print("\nWeather Report")
12 print("-----")
```

The terminal window at the bottom shows the command prompt running the script:

```
PS C:\Users\DELL> & C:/Users/DELL/AppData/Local/Programs/Python/Python314/python.exe "c:/Users/DELL/AppData/Local/Programs/Python/Python314/include/TASK 2.py"
Enter city name: 
```

Output

The screenshot shows the same Visual Studio Code interface, but now the terminal displays the output of the script after the user has entered "Coimbatore".

```
PS C:\Users\DELL> & C:/Users/DELL/AppData/Local/Programs/Python/Python314/python.exe "c:/Users/DELL/AppData/Local/Programs/Python/Python314/include/TASK 2.py"
Enter city name: Coimbatore

Weather Report
-----
City: Coimbatore
Temperature: 26 °C
Weather: Mist
Humidity: 84
PS C:\Users\DELL>
```

Output verification with google weather
